Abstract (en)

[origin: WO2021018599A1] Disclosed is a catalyst comprising nickel and copper, specifically 1 to 50% by weight of nickel element relative to the total weight of the catalyst, and 0.5 to 15% by weight of copper element relative to the total weight of the catalyst, and an alumina support, said catalyst being characterized in that: - the molar ratio of nickel to copper is between 0.5 and 5 mol/mol; - at least some of the nickel and copper is in the form of a nickel-copper alloy; - the nickel content in the nickel-copper alloy is between 0.5 and 15 wt. % of nickel element relative to the total weight of the catalyst; - the size of the nickel particles in the catalyst is less than 7 nm.
