Abstract (en)  
[origin: WO2021018677A1] The invention relates to a method for manufacturing a three-dimensional object or for modifying the surface state of a preformed object by local polymerisation of monomers or oligomers, the polymerisation being initiated by mono-photon or multi-photon absorption in an area to be polymerised, comprising the following steps: - introducing into a vessel with light-transparent walls a reaction medium comprising polymerisable monomers or oligomers, a polymerisation inhibitor, an indicator of the amount of the inhibitor and a photochemical polymerisation initiator; - initiating the polymerisation of the monomers or oligomers; - indicating the amount of inhibitor present in the reaction medium; - controlling the amount of light emitted by the irradiation system relative to the amount of inhibitor indicated by the indicator; and - switching to a following zone to be polymerised by means for moving the object and/or the focused light beam.
