Abstract (en)
[origin: WO2021018360A1] An electrical window opener (2) for opening and closing a window (12) that moveably arranged to a window frame (14) is disclosed. The window opener (2) comprises; a housing (4) having a length (L) and a longitudinal axis (X); an electrical motor (34) arranged in the housing (4); a chain (8) having a first end and a second end, wherein the first end is attached to a window bracket (10) and the second end is attached to an attachment structure arranged in the housing (4), a frame bracket (16) for rotatably attaching the housing (4) to the window frame (14) in order to allow the housing (4) to be rotated with respect to its longitudinal axis (X). The frame bracket (16) is attached to the housing (4) in two attachment points, wherein the distance between the two attachment points is smaller than the length (L) of the housing (4).
