Abstract (en)
[origin: WO2021013312A1] The invention relates to a tube bundle heat exchanger having a tube bundle (5) in a housing (2), wherein the housing (2) has a first inlet (3) and a first outlet (4) for a first medium (M1) for passage through the tube bundle (5) and a second inlet and a second outlet for a second medium for passage through a flow chamber surrounding the tube bundle (5) within the housing (2), wherein the ends of the tube bundle (5) are arranged in a tube sheet (11), which separates the flow chamber for the second medium from the first medium (M1). A separating body (16) is arranged as a flow distributor between the first inlet (3) and the tube sheet (11), which separating body prevents the first medium (M1) from flowing against the tube sheet (11) and has feed tubes (18), which bridge a compensating chamber (19) between the separating body (16) and the tube sheet (11) and protrude into the individual tubes (6) of the tube bundle (5) in order to conduct the first medium (M1) into the tubes (6), bypassing the tube sheet (11). The first inlet (3) is attached to a first group of tubes (6), the group having an enveloping surface, which is adjacent primarily to a second group of tubes (6) and is attached to the first outlet (4).
