Abstract (en)
[origin: WO2021018453A1] The invention relates to a method for testing a motor vehicle, said motor vehicle comprising an assembly having a rolling chassis and a body provided on the rolling chassis, the rolling chassis comprising multiple first interfaces and the body comprising multiple second interfaces allocated to the first interfaces, so that each pair of first and second interfaces can form a respective connection between the rolling chassis and the body, when the body is assembled on the rolling chassis. The method comprises, for example, a check as to whether all connections are correctly attached. The method comprises, for example, a check as to whether all components of the motor vehicle are responsive. The method also comprises, for example, a check as to whether the body may be used with the rolling chassis. The invention further relates to a device, a computer program, a machine-readable storage medium, a rolling chassis, a body and a motor vehicle.
