Abstract (en)

[origin: WO2021047931A1] The invention relates to a system (2) for producing a calibration solution (4) for the calibration of a gas chromatograph, having a liquid component (6) and at least one gaseous component (8), comprising a receiving device (10) for receiving the liquid component (6) and a multiplicity of different gaseous components (8), a first supply unit (12) for supplying a definable quantity of the liquid component (6) into the receiving device (10), a second supply unit (14) for supplying a definable quantity of a multiplicity of different gaseous components (8) into the receiving device (10), wherein the second supply unit (14) has a multiplicity of metering valves (16) for supplying the definable quantity of a multiplicity of different gaseous components (8).
