Abstract (en)  
[origin: WO2021013760A1] The invention relates to a method for displaying a warning message (4) as a warning that there is insufficient drive power available for use in an electric vehicle, having the steps of detecting (32) measurement values for determining a current output of an energy store of the electric vehicle using a detection unit (24), determining (34) a current peak output and/or continuous output of the energy store on the basis of the detected measurement values using a processing unit (22), comparing (36) the current peak output and/or continuous output with a peak output and/or continuous output threshold using the processing unit (22), and displaying (38) a warning message (4) by means of a display means (14) if the peak output and/or continuous output threshold is undershot, wherein the method is only initiated when an attempt is made to establish (30) driving readiness.
