Abstract (en)  
[origin: WO2021021037A1] Invention relates to Class 5 – Class 6 conductive flexible cable production system enabling weaving and outer casing process application and thus making diameter of cable (10) smaller without use of piping or filling thank to round structure formed by means of combining cores (13) in twisting process. The most important feature of said cable production system is that the space between cores (13) is minimized in twisting stage. Thus diameter of cable (10) is reduced and not only easy mounting but also reduction in production costs is achieved.
