Abstract (en)

[origin: WO2021013653A1] The invention relates to a method for manufacturing an electric cable (2), according to which the cable (2) is successively processed in processing modules (41, 43) that are independent from one another. According to the invention, at least one sheath clamp (10.1, 10.2, 10.3, 10.4), which is independent from the plug connectors (22) that are to be mounted on the cable (2) during manufacturing, is attached to a cable sheath (9) of the cable (2) in a non-positive fit at a defined axial position along the longitudinal axis (L) of the cable (2). Alternatively or in addition, the cable (2) is attached to a cable carrier (4), wherein the cable carrier (4) comprises at least one stop element (44) which is arranged at a defined axial position along the longitudinal axis (L) of the cable (2).
