Abstract (en)
An object of the present invention is to provide a bone regenerative agent showing a high bone regeneration effect. According to the present invention, a bone regenerative agent containing gelatin-containing granules and stem cells is provided. Gelatin preferably has repetitions of a sequence represented by Gly-X-Y, which is characteristic of collagen. Here, a plurality of Gly-X-Y's may be the same as or different from each other, and in the formula, X and Y each independently represent any of amino acid. A molecular weight of the gelatin is preferably 2 KDa or more and 100 KDa or less.
