Abstract (en)  
[origin: EP4005653A1] Different aspects of the invention refer to an assembly system for toys which facilitates the correct and intuitive assembly and disassembly by children. Additionally, this is achieved whilst maintaining the toy in an assembled state when subjected to accidental impacts. Further advantageous technical effects achieved are that of enabling the visually impaired user to recognize, by listening and/or tactile sensing, when a back part or a front part is being assembled/disassembled.
