Abstract (en)
Provided is a resin composition for imprinting excellent in imprint properties and optical properties such as high refractive index and low haze. The invention relates to a resin composition for imprinting containing: (A) a polysiloxane resin represented by the following formula (1): $(R^{1}_{SiO_{3/2}})_a(R^{2}_{SiO_{2/2}})_b(R^{3}_{SiO_{1/2}})_c(SiO_{4/2})_d$ wherein R^1 , R^2 , and R^3 are each independently a hydrogen atom, a hydroxy group, an alkoxy group, a C1-C12 hydrocarbon group, or a C1-C12 substituent having one or more crosslinkable functional groups, with at least one of R^1 , R^2 , or R^3 being a C1-C12 substituent having one or more crosslinkable functional groups, and when a plurality of R^1 s, R^2 s, or R^3 s are present, they may be different from one another; and a, b, c, and d are numbers satisfying the following conditions: $0.001 \leq a \leq 1.00$, $0 \leq b \leq 0.999$, $0 \leq c \leq 0.30$, $0 \leq d \leq 0.30$, and $a + b + c + d = 1.0$; and (B) a fine particulate inorganic oxide, wherein the ratio by weight of the sum of the polysiloxane resin (A) and optionally an alkoxy silane compound and a curable resin to the fine particulate inorganic oxide (B) is 0.2 to 2.5.
