Abstract (en)
A screening arrangement for a roof window, and roof window comprising such a screening arrangement. The screening arrangement (50) comprises a screening device (60) comprising a top casing (61). The top casing (61) comprises a bottom element (61a) and a top element (61b) delimiting a bar space accommodating and limiting movement of the roller bar (61r). The bottom element (61a) is configured to receive and support the roller bar (61r) during assembly of the screening arrangement (50). The top element (61b) is configured to be connected to the bottom element (61a) subsequent to the bottom element (61a) receiving the roller bar (61r). A winding device comprising a winding reel (671) is connectable to the roller bar (61r) at the first longitudinal end (61r1) of the roller bar (61r). Furthermore, the top casing (61) comprises a bottom end element (611a) and a top end element (611b) adjacent to the first longitudinal end (61r1) of the roller bar (61r) and further delimiting the bar space. The bottom end element (611a) and the top end element (611b) delimit a reel space (61w) accommodating and limiting movement of the winding reel (671). The bottom element (61a) of the top casing (61) is configured to receive and support the roller bar (61r) during assembly of the screening arrangement (50) and the top element (61b) is configured to be connected to the bottom element (61a) subsequent to the bottom element (61a) receiving the roller bar (61r).
