Abstract (en)

A wind power station (2) is disclosed, comprising a flow channel (4) extending at least approximately in a vertical direction between an inlet (6) and an outlet (8), and a wind turbine (10) for producing electrical energy having a propeller (14), the propeller (14) being arranged downstream of the outlet (8) and overlapping the outlet, characterized in that the wind power station (2) is designed to surround a heat exchanger wall (30) of a heat exchanger, said heat exchanger wall (30) being arranged in the flow channel (4) and designed to transfer heat to a fluid in the flow channel (4) to induce a fluid flow in the flow channel (4) impinging on the wind turbine (10).
