Abstract (en)
For power transfer from a first DC part to a second DC part in a dual active bridge (DAB) converter by stepping down a voltage, a first bridge circuit 11 includes a period in which the first DC part and a primary winding n1 of an insulated transformer TR1 conduct and a period in which ends of a primary winding n1 of the insulated transformer TR2 are short-circuited in the first bridge circuit 10. A second bridge circuit 12 includes a rectification period. A control circuit 13 variably controls a phase difference between a first leg a the second leg, variably controls a simultaneous off period of a fifth switching element and a sixth switching element, and variably controls a simultaneous off period of a seventh switching element and an eighth switching element.
