Abstract (en)

[origin: WO2016050622A1] Device (28) comprising an object accommodating system (1) comprising two flaps (2, 3) that define between one another an accommodating space (4) and bear against a plate (7) of a pushbutton (8) designed to move between a first position corresponding to the placing of the object in the accommodating space, this causing the ends (5a, 5b) of the flaps to be spaced apart, and a second position corresponding to the removal of the object, this causing the two ends (5a, 5b) to move towards one another, the plate (7) being connected to a compression spring (13) bearing against an end wall (21) of a housing (16).
