Abstract (en)
A frame (10) for sliding doors, which comprises, with respect to its installation configuration:- a profiled front post (11), against which a door leaf (12) is adapted to abut for closure,- a profiled upper lintel (13), to be joined at one end thereof to the upper end of the front post (11),- two mutually opposite profiled intermediate posts (14), in an intermediate position of the upper lintel (13) and defining between them an inlet for the door leaf (12),- at least one profiled element (17) for extending the transverse cross-section of at least one, or of at least one portion, of the front post (11), the upper lintel (13), and the intermediate posts (14), with which it can be coupled by snap action. The profiled element (17) is adapted to be installed with an extension portion (18) which is substantially coplanar with a surface of the entryway (19) of the sliding door and substantially up to the wall surface that is directed toward the side of a room.
