Abstract (en)
[origin: WO2022069007A1] A foldable baby bathtub (01) comprising a cup-like container with a flexible plastic material tube (03), used for holding liquids, demands waterproof plastic materials, like TPE (thermoplastic elastomers). The shape mimics the womb allowing less stressful bathing experience for an infant. A foldable baby bathtub is made of plastic and have a hard top rim (02) with a flexible tube and bottom made of a soft flexible material, e.g. thermoplastic elastomers (TPE), the flexible material tube is connected with the top rim, which is made of a harder material than the tube and bottom. Two legs (04) are placed/clicked on the lower side of the top rim into slats-locks (07), which prevents the legs from moving or tilting. A foldable bathtub for children takes no room, when not in use.
