Abstract (en)  
[origin: WO2021024010A1] A shoe comprises a sole having an upper surface and a lower surface, and a top member having an outer surface and an inner surface and mounted on the sole. The top member and sole together define a space for receiving a foot, and the top member further comprises an opening. As will be appreciated, the present invention as described herein in its various embodiments can take a significant number of different versions and forms. Central to all of the embodiments is the provision of a shoe which contains structure for allowing portions of the top member to expand in an accommodating manner for differing type of foot, toe, and ankle type braces as well as allowing for an easier insertion of a foot wearing a brace into a shoe.
