Abstract (en)
[origin: WO2021023939A1] The invention relates to a fluid product spraying device, characterised in that it comprises: - a foldable substrate (S1) defining two opposite edges (B) and a folding zone (Zp) disposed between the two opposite edges (B), the two opposite edges (B) being able to approach one another by folding the folding zone (Zp), - a carrier layer (C1) applied on the folding zone (Zp), - a fluid product (P) contained in the carrier layer (C1), so that the folding of the foldable substrate (S1) leads to an increase in the pressure of the fluid product (P) contained in the carrier layer (C1), which has the consequence of expelling the fluid product (P) out of the carrier layer (C1) in the form of small sprays of fine sprayed droplets.
