Abstract (en)

[origin: WO2021028242A1] The invention relates to a method for producing a component from component material comprising at least one plastic material, wherein the method comprises the following steps: providing a component substrate from which the component is to be produced; applying a metal foil to the component substrate in at least one application section; consolidating the plastic material contained in the component substrate in such a way that the metal foil is bonded to the consolidated plastic material in the application section; and peeling the metal foil from the component substrate after consolidation.
