Abstract (en)  
[origin: CA3149316A1] The present description relates to the maritime sector. In particular, the invention relates to a device (100) for moving a watercraft, the device comprising: - at least one propulsion chamber (50) comprising a first inlet section for a liquid, referred to as the upstream edge (50a), and a second outlet section for the liquid, referred to as the downstream edge (50b); - at least one flexible membrane (M1) housed in the chamber; and - at least one actuator (A1) configured to produce thrust from the vehicle through corrugation of the membrane between the upstream edge and the downstream edge.
