Abstract (en)

[origin: WO2021028116A1] The invention relates to a basic structure of a fabric for a machine for producing or processing a fibrous web, in particular a paper, cardboard or tissue web, comprising at least a first flat fabric of fabric type A and a second flat fabric of fabric type B, wherein, furthermore, the basic structure comprises two loop elements, wherein the loop elements are formed in each case from a flat fabric piece which has a first portion of fabric type A and a second portion of fabric type B, and wherein the first portion is laid down on the second portion in such a way that the folding point is configured at a spacing of less than 5 cm, in particular less than 1 cm, from the changeover position between fabric type A and fabric type B, and wherein the first and the second flat fabric are arranged above one another, and the two loop elements are arranged in each case at a face-side end.
