Abstract (en)
[origin: WO2021028624A1] The invention relates to a method for manufacturing a wall of a sealed and thermally insulating tank, involving: Providing a thermally insulating barrier having two insulating panels (3) that delimit an inter-panel space (2), Providing an insulating insert (1) comprising a cover that entirely covers an insulating core, Inserting a suction end piece of a suction system (24) into the insulating insert (1) through an opening in the cover, Applying a negative pressure in the insulating insert (1) so as to reduce the thickness of said insulating insert (1) through negative pressure, Inserting the insulating insert (1) into the inter-panel space (2) while maintaining the suction of the suction system (24), Once the insulating insert (1) has been inserted into the inter-panel space (2), removing the suction end piece from the insulating insert (1).
