Abstract (en)
[origin: WO2021024171A1] Present disclosure relates to system (1) and method (30) for inventory management in a medical facility. The system (1) comprises an input unit (2), memory device (10) and processing unit (22). The input unit (2) is configured to receive a user input (3) related to one or more medical procedures. The memory device (14) is configured to store a mapping information (11) and a historical information (16). The processing unit (22) is configured to retrieves and processes the user input (3) along with mapping information and historical information to generate a forecast(s) (23-24). The invention facilitates generation of inventory forecasts which are accurate and efficient.
