Abstract (en)
[origin: WO2021023332A1] The invention relates to an electric machine comprising a stator (2) with a winding (3) having a plurality of conductors (4) associated with one or more phases and interconnected with each other, the ends (6) of at least two conductors (4) are associated with a phase projecting axially or radially from the winding (3) at the inner circumference and/or the outer circumference of the winding (3) and are connected to a power connection (9) that is mounted radially outside the winding (3) by a common connecting conductor (12a).
