Abstract (en)
A stamp-type fluid discharge apparatus includes a container storing fluid, and a discharge unit coupled to the container and discharging the fluid stored in the container in a longitudinal direction of the container by a stamping operation in which the discharge unit is pressed after coming into contact with an object, wherein the discharge unit includes: a pumping part having a portion installed in the container to pump part of the fluid stored in the container by the stamping operation, and a discharge part connected to the pumping part and discharging a pumped fluid, and the discharge part includes a discharge hole formed in the length direction of the container, and a protruding wall protruding in a loop shape to surround the discharge hole and isolating the discharge hole and the object when coming into contact with the object.
