Abstract (en)
[origin: CA3201730A1] The present disclosure relates to a cleaning system for cleaning living insects, in particular living insect larvae or living worms, comprising a collecting device for receiving and mixing the insects or worms with water to form a mixture, a first conveying device for conveying the mixture out of the collecting device and a first larvae-separating device for separating the insects or worms from the water from the mixture conveyed by the first conveying device. The separated water is available for further use in the cleaning system, in particular the water is at least partially recirculated in an insect facility, in particular in the cleaning system.
