Abstract (en)
[origin: WO2021027993A1] The invention relates to a clamping device comprising a clamping member (2), which is movably mounted in a main body (1); a linearly movable actuator (3), which is operatively connected to the clamping member (2); a spring element (4), which is operatively connected to the actuator (3); and a rotatably mounted actuating element (5), which is operatively connected to the spring element (4). According to the invention, the spring element (4) is designed as a compression spring which can be compressed when tensioning by means of the actuating element (5).
