Abstract (en)

[origin: WO2021028084A1] The invention relates to a method for handling products (17) using an automation system and to an automation system (10), wherein: the products are captured by means of an imaging sensor (18) of a control device (12) of the automation system and are handled by means of a handling mechanism (13) of a handling device (11) of the automation system; the control device processes sensor image data from the imaging sensor and controls the handling device as specified by training data sets contained in a data memory (21) of the control device; the training data sets comprise training image data and/or geometrical data and control instructions associated therewith; the training data sets are generated, as a statistical model, exclusively from geometrical data contained in the training image data of products, by a computer using a computer program product executed thereon; and the training data sets are transmitted to the control device.
