Abstract (en)

[origin: WO2021028221A1] The invention relates to a baling press (30) for baling deformable material, comprising: a compressor (34) and a closure plate (33) which delimits one side of a working chamber (31) of the compressor (34); wherein the baling press (30) is designed such that the closure plate (33), when actuated, closes the side of the working chamber (31) in a first direction and opens it in a second direction, and such that the compressor (34) can be moved into the working chamber (31) along the closure plate (33).
