Abstract (en)

[origin: WO2021032592A1] A device for the tool-plate positioning of flat embossing machines has an upper (11) and a lower (21) tool receiving plate and upper (10) and lower (20) mounting plates assigned thereto. These tool receiving plates (11, 21) can be inserted against the mounting plates (10, 20), wherein the depth of the insertion position is defined in an insertion direction (7) for the tool receiving plates (11, 21) by corresponding separate stops (32, 33) that fix said insertion position by the pushing together of the upper mounting plate (10) with respect to the lower mounting plate (20). To this end, first and second locking actuators (12, 12', 22) are provided, with which the tool receiving plates (11, 21) are able to be braced with the mounting plates (10, 20) assigned thereto.
