Abstract (en)

[origin: WO2021029768A1] A high-pressure electrolysis unit for generating hydrogen and oxygen is provided comprising an assembly of tubes and pipes of electrically conductive metal, which constitutes either the anode or the cathode, with an arrangement of interconnected vertical and horizontal pipes and tubes, which are closed by welding or threaded fitting plugs, with the exception of the pipes for water inlet connection and hydrogen and oxygen outlet connections, wherein the internal face of the channel arrangement is coated with an electrically isolated coating, the counterelectrodes constituting the cathodes or anodes, respectively, being positioned in the vertical pipes enveloped by a cylindrical membrane and supported and connected by electrode support bars installed in horizontal pipes in the upper part of the housing.
