Abstract (en)

[origin: WO2021046021A1] In a particular embodiment, determining whether to service an unmanned aerial vehicle (UAV) is disclosed that includes accessing, by a smart contract controller executing on a device of a UAV transportation ecosystem, one or more parameters associated with a UAV. In this embodiment, the smart contract determines whether the one or more parameters satisfies one or more conditions for fulfillment of the smart contract. In response to determining that the one or more parameters satisfies the one or more conditions for fulfillment of the smart contract, the smart contract indicates a requirement for the UAV to receive a service operation.
