Abstract (en)  
[origin: WO2021032572A1] The invention relates to an electric push-button switch comprising a mechanical switching element having a haptic element which produces a pressure point and has a restoring spring which generates a restoring force, said switch also comprising an actuating element which is movable relative to a guide housing and by which, during a movement, the switching element which is stationary relative to the guide housing is actuated against the restoring force, at least one resilient element for compensating for tolerances being arranged between the guide housing and the actuating element, the action of the spring force of said resilient element being directed in the direction of actuation of the actuating element and against the restoring force of the switching element.
