Abstract (en)

[origin: EP4014936A1] The current invention concerns a sensor system (102) configured for detecting a property of or within an absorbent article (100), comprising:- a first sensor (110) configured to measure a first physical parameter, said first sensor (110) being configured to detect a change in condition of or within the absorbent article (100);- a second sensor (112) configured to measure a second physical parameter, said second sensor (112) being configured to detect a change in condition of or within the absorbent article (100).According to the inventio, the first and second physical parameters are different from one another. The invention also concerns an absorbent article comprising such sensor system.
