Abstract (en)
[origin: CN116648534A] In recent years, reduction of friction and abrasion is more important in research and development of knitting tools. The knitting tool (1) according to the invention and the knitting apparatus (27) according to the invention are therefore suitable for reducing friction and accumulation of dirt (23) in knitting machines compared to conventional knitting tools. For this purpose, the knitting tool (1) has a section (7) in the functional region (5), in which section the value of the slope of the line of gravity (4) is greater than zero.
