Abstract (en)
[origin: WO2022128295A1] The invention relates to a sewing machine needle (1) which reduces the friction between the shaft of the sewing machine needle (1) and the sewing item and which thereby can be produced economically in large numbers. The sewing machine needle (1) comprises a needle eye (3) and at least one recess (5), wherein the distance of an upper edge (6) of the recess (5) to the width position of the axis (12) of the needle eye (3) is different from the distance of a lower edge (7) of the recess (5) to the width position of the axis (12) of the needle eye (3).
