Abstract (en)
[origin: WO2022135794A1] The invention relates to a civil engineering tool for attaching to a civil engineering machine, having: a carrier device; at least one sensor for capturing operating data on the civil engineering tool. According to the invention, an operating data unit autonomous with respect to the civil engineering machine is arranged on the civil engineering tool, which operating data unit has the at least one sensor and a data store in which the data captured on the civil engineering tool can be stored and accessed independently of the carrier device.
