Abstract (en)  
A humidifier (10) is disclosed comprising a water containing arrangement (14, 70) for containing water and a nebulizing device (20) for nebulizing water from said water containing arrangement, an evaporation chamber (12) arranged over said nebulizing device, said evaporation chamber terminating at an impactor (40); and a fan (80) arranged to generate an air flow (85) through said evaporation chamber towards the impactor. The impactor comprises an inner body (50) having a plurality of apertures (54), and an outer body (60) having a plurality of further apertures (64) fluidly connected to said apertures, wherein said further apertures are offset relative to said apertures such that each aperture in the inner body faces a section (62) of a material of the outer body that is spatially separated from said aperture. Also disclosed is an impactor (40) for use with such a humidifier.
