Abstract (en)

[origin: EP4016236A1] The present invention pertains to a method for keeping fluid flow constant in a radiator, said radiator comprising an inlet and an outlet conduit for fluidly connecting the radiator with a fluid source and an electronic thermostat for controlling the fluid flow in the radiator. The invention also pertains to a system for keeping fluid flow constant in a radiator by means of a corresponding method, said system comprising an electronic thermostat and a temperature sensor, wherein the electronic thermostat and the temperature sensor are wirelessly connected to each other.
