Abstract (en)

The object of the invention is a contact for providing an electrical connection at an electrical connector, comprising:- a projection intended to block longitudinal movement of the contact by resting the projection on an edge cooperating therewith of the housing opening intended for the contact,- a first narrowing with a seal embedded therein,- a second narrowing, intended to snap-fit the contact in the opening of the housing intended for the contact, by snapping latches located in the opening of the housing and cooperating with the second narrowing, characterised in that said elements are present in the contact in the following order from the side intended for connecting the contact with the electric conductor: the projection, the first narrowing with the seal embedded therein, the second narrowing. The object of the invention is also an electrical connector housing and an electrical connector itself.
