Abstract (en)
[origin: WO2021032765A1] The invention relates in general to a method of storage of respiratory produce and a system or device for storage of respiratory produce. More specifically the storage system or device includes at least one chamber in which respiratory produce is stored, whereby the base of such comprises at least one airlock and an airtight cover for gastight sealing. Inside the chamber, air circulation is provided by a fan and air duct system to ensure homogeneous mixing. The gas composition inside the storage chamber is controlled by a storage controller which is functionally connected to the storage system or storage device using airtight gas connectors which allow injection and withdrawal of gas from the storage system. The fan inside the storage system is provided with power by an electricity cable via an airtight cable connector.
