Abstract (en)

[origin: WO2021032838A1] The invention relates to a method for monitoring the state of a device (1), the device (1) comprising: - a first drive cylinder (10a) for receiving hydraulic fluid (HF) and - a first drive piston (11a) which is movably arranged in the first drive cylinder (10a), the method comprising the steps of: - determining a speed of the first drive piston (11a), - establishing a difference between the determined speed of the first drive piston (11a) and an expected speed of the first drive piston (11a), and - determining a faulty state as a function of the difference established between the determined speed of the first drive piston (11a) and the expected speed of the first drive piston (11a).
