Abstract (en)

[origin: WO2021058244A1] In one embodiment, the method is used for configuring components (2) of a railway signalling system (1) and comprises the steps of: A) providing a plurality of components (2), B) providing a central computer unit (3), and C) updating configurations (22) of the components (2) by means of the central computer unit (3), wherein - a unique identifier (4) is assigned to each of the components (2), - the identifiers (4) are each determinable, and - the update of the components (2) is requested from the central computer unit (3) and is carried out in a cryptographically secure manner.
