Abstract (en)

[origin: EP4019558A1] The objective of the invention is to provide a curable ink composition capable of forming a cured product with a high refractive index and applicable to the inkjet method, a cured product of the curable ink composition, and a nanocomposite having a film composed of the cured product of the curable ink composition. In this invention, in a curable ink composition including a photopolymerizable compound (A) and metal compound nanocrystals (B), using a sulfide compound (A1) having specific structure and a (meth)acrylate compound (A2) as the photopolymerizable compound (A), and using zirconium oxide nanocrystals as the metal compound nanocrystals (B), and accomplished the present invention.
