Abstract (en)

[origin: WO2021038290A1] Examples disclosed herein are relevant to a therapeutic element assembly having a carrier configured to introduce one or more therapeutic elements into a recipient. A stabilizer is permanently embedded in and longitudinally extends through at least a first region of the carrier. The stabilizer is configured to decrease the flexibility of the carrier so as to resist deformation of said first region during implantation into the recipient. The stabilizer is formed from an elastomeric material.
