Abstract (en)
[origin: WO2021040514A1] The invention relates to a modularly built vessel (W). The vessel comprises a main strength frame (1) and a separately built floating body (2). Preferably, the drive for the vessel is provided on the main strength frame, while the floating body substantially provides for buoyancy. The invention further relates to a method for building a vessel (W), for example a vessel according to the invention. The method comprises providing independently of each other a main strength frame (1) and a floating body (2), and rigidly connecting the main strength frame (1) and the floating body (2) to create the vessel (W).
