Abstract (en)

[origin: WO2021038176A1] Disclosed is an attachment system (1) for attachment to a signalling device (9), such as a signalling beacon or a signalling barrier, the attachment system (1) comprising a generally ring-shaped attachment member (10) made from an elastic material, the attachment member (10) comprising: - an annular base (11) provided with an outer peripheral edge and a central hole defining an inner peripheral edge (14), the annular base (11) also being provided with a lower annular surface and an upper annular surface; - at least one fin (17) protruding from the outer peripheral edge of the annular base.
