Abstract (en)

[origin: WO2021037570A1] Kit for creating an assembly for an electronic lock (1) comprising: - a lock cylinder (2), - a drive unit (3) configured to turn the rotor (22) of the cylinder (2) via a coupling means (4), - securing means (5) that are configured to removably attach the cylinder (2) to the drive unit (3), comprising a member (51) for locking the cylinder (2) and the drive unit (3) together, said kit comprising said cylinder (2) and said drive unit (3), each in the assembled state, and not coupled to one another, wherein: - said coupling means (4) is configured to slot into the rotor (22) of the cylinder (2) so as to rotationally couple the rotor (22) to the drive unit (3), - said securing means (5) also comprise an attachment means (52) that is as one with the drive unit (3), configured to be inserted into the stator (21) of the cylinder (2).
